

**Thank you for purchasing your new ECS Tuning
Fuel Cap Cover we appreciate your business!**

**Stunning Design:**

- Our fuel cap covers are constructed of durable billet aluminum and feature a sleek anodized finish.

**OEM Fitment:**

- Each fuel cap cover features an optional sleek and durable tether to replace the brittle plastic one to maintain an OEM look and feel.

Seamless Installation:

- The cover simply slides over the stock plastic cap and the two set screws retain it in place.

Section 1: Installing the Fuel Cap Cover

- Step #1** • Using a razor blade, carefully make a small notch in the plastic tether loop as shown and remove it from the plastic mounting stud (arrow).
- Step #2** • Remove the fuel cap from the vehicle and using a razor blade, carefully make a notch in the plastic tether ring (arrow) and pull it off the fuel cap as shown.
- Step #3** • Slide the fuel cap cover over the fuel cap as shown and tighten the two set screws (arrows) with a 2mm allen wrench.
- Step #4** • Slide the tether loop over the mounting stud and reinstall the fuel cap.
• **NOTE:** This tether is completely optional and can be easily removed by pulling the metal tether ring out of the groove on the cover.
